Rene Pair — Book a Repair Page Prompt

Follow-up prompt · paste into the SAME Figma Make thread as the homepage

How to use this

1. Go back to the same Figma Make conversation where you generated the homepage — don't start a new thread.

2. Paste the boxed prompt below into that thread and submit it.

3. This gives you a second page to screenshot for the "different site views" requirement — Home page and Book a Repair page, both desktop only.

4. Full responsive (mobile/tablet) versions are intentionally left for Finals — this pass is midterm-scope only.

Copy-paste prompt

Paste everything inside the dark box below.

Now design a second page for the same site called **"Book a Repair."** Keep the exact same colors, fonts, header, navigation, and footer already established on the homepage — do not change the design system, just extend it to this new page. Desktop layout only, no mobile or tablet version needed yet.
This page opens when someone clicks the "Book a Repair" button from the homepage.
Page heading: "Book a Repair" as a large bold headline, with one short supporting line underneath: "Tell us what's going on — we'll get back to you within the hour."
Layout: two columns. Left column is a booking form. Right column is a quick-contact side panel.
Booking form fields (left column): Full Name (text), Phone Number (text), Email Address (text), Service Needed (dropdown with options: Oil & Filter Change, Brake Service, Tires & Alignment, Diagnostics, Transmission, AC Repair, Other), Preferred Date (date field), Additional Notes (textarea). End with a yellow filled button labeled "Request Booking."
Side panel (right column): a dark asphalt card containing: shop address (124 Auto Row, Angeles City, Pampanga), hours (Mon–Sat, 8am–6pm), phone (+63 912 345 6789), and email (hello@renepair.ph). Use the same yellow icon style as the homepage trust bar for each line.
Signature detail: reuse the same checkered-flag divider strip directly below the header, exactly like on the homepage, so the two pages feel like one site.
Keep this page simple and uncluttered — this is a midterm mockup, not the final build. No extra sections beyond the heading, the form, and the side panel.

Once both pages look right, take your screenshots (Home page, Book a Repair page) for the "Visible Screenshots of the different site views" section of your documentation.
